- it was in the field investigator's, transferee's, or lab technician's physical possession and then he/she secured it to prevent tampering; or
- it was placed in a designated secure area.

Prior to each sample collection event, each sample container had a self-adhesive, non-removable sample label affixed. As samples were collected, all sample containers were labeled with an

identification number that uniquely identified the sample. The sample identification number was logged in the field forms along with the following information about the sampling event:

1. Sampling personnel
2. Date and time of collection
3. Field sample location and depth (if appropriate)
4. Observations on ambient conditions
5. Type of sample (composite or grab)
6. Method of sampling
7. Sampling matrix or source
8. Results of field screening
9. Intended analyses

Sample labels contained the following information:

- Site name;
- Project number;
- A unique sample identification number;
- Date and time of sample collection;
- Analysis to be performed; and
- Preservation chemical (if applicable).

Sample identifiers (IDs) consisted of the sample location name and sample collection depth (as appropriate), as well as the date of sample collection. Field duplicate samples required special procedures for sample designation to ensure that they were submitted blindly to the laboratory. A fictitious sample ID and time was used on the submitted sample, with both the fictitious and actual information documented in the standard field forms.

All samples were stored in an insulated cooler containing ice packs or ice sealed in a plastic bag. Samples selected for laboratory analysis were transferred to insulated coolers for overnight shipment to the laboratory. Each cooler was packed in a manner that prevented damage to sample containers during shipment and contained a sufficient amount of ice or ice packs to ensure that the temperature was maintained between approximately 0ºC and 4ºC.

A Chain-of-Custody Record (COC) accompanied each cooler and was used to trace the possession and handling of all samples, from their collection, through analysis, until their final disposition. The Chain-of-Custody Record documented the names of the relinquishing and receiving parties, the time and date of the transfer of custody, and the reason for the transfer of custody. One COC accompanied each cooler shipped to the laboratory. The form was placed in a sealed plastic bag inside the cooler, typically taped to the inside lid of the cooler. Following packing, the cooler lid was sealed with strapping tape. A custody seal was signed, dated and affixed from the cooler lid to the cooler body and was additionally covered with clear tape; thus ensuring that tampering with the cooler contents would be immediately evident. The sample

coolers were typically shipped by overnight express courier to the laboratory. A copy of the COC and bill of lading were retained. Each sample shipment was tracked via the courier waybill number to ensure that prompt delivery of the shipment to the laboratory occurred.

Notes:

1. ft BLS indicates feet below land surface.
2. µg/L indicates micrograms per liter.
3. MG/L indicates milligrams per liter.
4. U indicates result not detected above practical quantitation limit (PQL)
5. I indicates the result is between the method detection limit (MDL) and the PQL.
6. V indicates analyte was detected in both the sample and the associated method blank
7. NC indicates not calculated.
8. RPD indicates relative percent difference
9. **Bold** indicates the result was detected above the MDL.
10. Results not displayed to a set number of significant digits.

Laboratory Results for: ESTCP PED LC34

Dear Cory:

Enclosed are the results of the sample(s) submitted to our laboratory on January 21, 2011. For your reference, these analyses have been assigned our service request number **R1100415**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1100415

Lab ID	Client ID
R1100415-001	LC34-SB1003-028.0-20110119
R1100415-002	LC34-SB1003-034.0-20110119
R1100415-003	LC34-SB1003-047.0-20110119
R1100415-004	LC34-SB1003-053.0-20110119
R1100415-005	LC34-SB1002-028.0-20110119
R1100415-006	LC34-SB1002-034.0-20110119
R1100415-007	LC34-SB1002-047.0-20110119
R1100415-008	LC34-SB1002-053.0-20110119

All samples were received in good condition unless otherwise noted on the cooler receipt and preservation check form located at the end of this report.

All samples were preserved in accordance with approved analytical methods.

All samples have been analyzed by the approved methods cited on the analytical results pages.

All holding times and associated QC were within limits.

No analytical or QC problems were encountered.

All sampling activities performed by CAS personnel have been in accordance with "CAS Field Procedures and Measurements Manual" or by client specifications.

Samples have been subcontracted to the following laboratory(ies). The subcontractor's analytical report is attached:

RSA Geolab, LLC
Union, NJ

Columbia Analytical Services

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

RE: NASA CCAFS LC34, KSC, FL - Final Data Report
KB Labs Project # 11-5

Dear Ms. DaPrato:

Enclosed is the final report of the on-site analysis performed by KB Labs, Inc. at the above referenced site. Samples were collected and analyzed on January 19, 2011. Included are a brief project narrative, data report narrative, tables listing quality control results, final analytical results, and sample chain-of-custody form.

KB Labs' mobile laboratories have been inspected by the FDOH Bureau of Laboratories and are NELAP Certified as of April 1, 2003. Our personnel, methodology, proficiency testing, and quality assurance requirements comply with the guidelines of Chapter 62-160 of the Florida Administrative Code and with the consensus standards adopted at the National Environmental Laboratory Accreditation Conference (NELAC). Data for the site referenced above were determined in accordance with published procedures under Test Methods for Evaluating Solid Waste (EPA SW-846, Update III Revised May 1997). Unless otherwise indicated on the quality control narrative accompanying the data report, the quality assurance and quality control procedures performed in conjunction with analysis of groundwater samples demonstrated that the reported data met our requirements for accuracy and precision under NELAC Standards.

If you have any questions, please do not hesitate to call me or Kelly Bergdoll, President of KB Labs, at (352) 367-0073.

Sincerely,

KB Labs, Inc.

Todd Romero
Director of Operations

PROJECT NARRATIVE

Project Scope

On January 19, 2011, a total of 19 soil samples were analyzed for GeoSyntec Consultants at NASA CCAFS LC34, KSC, FL. The samples were analyzed for vinyl chloride, 1,1-dichloroethene, cis- and trans-1, 2-dichloroethene, trichloroethene, tetrachloroethene, and n-butyl acetate.

NELAP Certification

KB Mobile Labs Unit KB3: FDOH NELAP Certification Number E82816

Note: KB Labs is not NELAC certified for N-butyl actetate. Data should be consider screening level only.

Analytical Procedure

All samples were analyzed using SW846 Method 5030/8260 for waters. Ten (10) milliliters (mL) of water or air (air samples) were purged with helium and the volatile organic compounds (VOCs) were collected on a solid-phase adsorption trap. The adsorption trap was heated and back-purged with helium. The components were then separated by capillary column gas chromatography and measured with a mass spectrometer (GC/MS) operated in the electron impact full-scan mode. The individual VOCs in the samples were measured against corresponding VOC standards.

The soil samples were analyzed using SW846 Method 5030/8260. One (1) gram (g) of soil sample was added to 10 mL of laboratory reagent water, heated and analyzed like a water sample as described above.

Unless otherwise indicated, soil data is calculated based on the matrix received (i.e. wet weight basis).

Analytical Results

Laboratory results were provided to the client on an as-completed or next-day basis. Final results of the on-site analyses are provided in a hardcopy report. The data produced and reported in the field has been reviewed and approved for this final report by the Director of Operations for KB Labs.

KB Labs, Inc.

Phone: 352-472-5830
Fax: 352-472-5832
Email: info@kbmobilelabs.com

Uncertainty of Reported Values

All measurement data presented in this report are subject to a degree of uncertainty and the degree of uncertainty varies with each compound of interest. KB Labs estimates the uncertainty of each measurement using a statistical evaluation of the standard deviation from the mean percent recovery of a number of trials of a given measurement. More specifically, KB Labs maintains historical percent recovery control limits at the 99% confidence level for each analyte of interest. These are calculated as ± 3 times the standard deviation from the mean of historical measurements of the percent recovery of spikes of the analytes of interest into actual and control sample matrices. For example, if the lower and upper percent recovery control limits for a specific analyte of interest have been determined to be 70 and 100 percent respectively, a reported value of 10.0 ug/L will be with 99% confidence 7.0 to 13.0 ug/L.For more information about KB Labs estimation of uncertainty, contact KB Labs' quality assurance officer and/or request a copy of KB Labs' SOP for determining measurement uncertainty.

Quality Control (QC) Data

Surrogate Recoveries – Table 1 lists the daily analytical sequence and percent recovery results for surrogate compounds, which were added to all analyses. Four (4) surrogate compounds were added to each analysis in order to continually monitor general method performance.

VOC Spike Recoveries – Table 2 lists the percent recovery results for matrix spike and laboratory control samples. A known amount of each target compound was added to selected field samples and to laboratory reagent water in order to monitor the performance of each of the target compounds in the actual matrix and in laboratory reagent water.

Method Blanks – Daily analysis of laboratory reagent water samples was performed in order to monitor the cleanliness of the analytical system.

DATA REPORT NARRATIVE

1. All sample data has been reviewed and, if required, updated in the Final Data Report for rounding and significant figures.

2. Sample ID LC34-SB1001-024.0-20110119 has an "L" qualifier for c-1, 2-dichloroethene indicating the Concentration exceeded Calibration range. Sample was reanalyzed later in the run sequence at medium-level. Data inconsistent with original run. Original run considered best reportable analytical data.

3. As per NASA client request for diluted samples between the lab RL and MDL are reported with FDEP Data Qualifier "I".

4. Reporting limits for sample ID SB1004-037.0-20110119 adjusted to correct dilution level.

Laboratory Results for: ESTCP PED LC34/ TR0272

Dear Cory:

Enclosed are the results of the sample(s) submitted to our laboratory on February 2, 2011. For your reference, these analyses have been assigned our service request number **R1100627**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1100627
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	2/2/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Seventeen (17) water samples including one (1) Trip Blank were collected by the client on 2/1/11 and were received for analysis at Columbia Analytical Services on 2/2/11 via a national courier. The samples were received at a cooler temperature of 2°C, within the 0-6°C guidelines.

Volatile Organic Compounds by EPA Method 8260C

Water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except the following:
N-Butyl acetate %Differences (%D) was out at 24.6%D (criteria is ±20%) on the 2/3/11 CCV
n-Butanol %D was -22.1%D on the 2/4/11 CCV
n-Butanol %D was -29.7%D on the 2/8/11 CCV.
When CCV %D criteria are not met, it may indicate some bias in the quantitation for that target compound in the associated samples. These compounds were not detected in all samples associated with the outlying CCV's, therefore data was acceptable.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) recoveries were all within QC limits except for Dichlorodifluoromethane on the 2/4/11 analytical run which was outside limits, high. The recovery has been flagged as "*". No data was affected.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The hits are flagged as "E", estimated. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". Both sets of data are included in the report.

Samples were analyzed within 7 days from collection, the holding time for unpreserved vials.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Approved by Karen Burke **Date** 2/17/11

CASE NARRATIVE

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Laboratory Results for: ESTCP PED LC34 2/2/11/ TR0272

Dear Cory:

Enclosed are the results of the sample(s) submitted to our laboratory on February 3, 2011. For your reference, these analyses have been assigned our service request number **R1100644**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

KBunker for:
Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1100644
Project:	ESTCP PED LC34/ TR0272 2/2/11	**Date Received:**	2/3/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Thirteen (13) water samples including one (1) Trip Blank were collected by the client on 2/2/11 and were received for analysis at Columbia Analytical Services on 2/3/11 via a national courier. The samples were received at a cooler temperature of 1.2°C, within the 0-6°C guidelines. Two locations had vials with air bubbles in 1 of the 3 vials received for the samples, no data is affected.

Volatile Organic Compounds by EPA Method 8260C

Water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except the following:
Bromomethane and Dichlorodifluoromethane %Differences (%D) were out at -26.8 %D and -28.1 %D respectively (criteria is ±20%) on the 2/7/11 CCV
When CCV %D criteria are not met, it may indicate some bias in the quantitation for that target compound in the associated samples. These compounds were not detected in all samples associated with the outlying CCV's, therefore data was acceptable.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) recoveries were all within QC limits.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The hits are flagged as "E", estimated. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". Both sets of data are included in the report. Only the "E", estimated values should be used from the diluted reanalysis.

The cis-1,2-Dichloroethene hit for location LC34-IW0076-075.0-20110202 (R1100644-008) is carryover from the hit in the previous location (-007).

Samples were analyzed within 7 days from collection, the holding time for unpreserved vials.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Approved by Karen Burdett **Date** 2/22/11

CASE NARRATIVE

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Cooler Receipt And Preservation Check Form

Project/Client GeoSyntec Folder Number R1100644

Cooler received on 2/3/11 by: CMK **COURIER:** CAS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	(YES)	NO			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO			
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	(YES)	NO	N/A	see below	
5.	Were **Ice** or **Ice packs** present?	(YES)	NO			
6.	Where did the bottles originate?	(CAS/ROC)	CLIENT			
7.	Temperature of cooler(s) upon receipt:	1.2°				
	Is the temperature within 0° - 6° C?:	Yes	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 2/3/11 0935

Thermometer ID: (IR GUN#3) / IR GUN#4 Reading From: (Temp Blank) / Sample Bottle

If out of Temperature, note packing/ice condition, Client Approval to Run Samples: _____

PC Secondary Review: VB 2/3/11

Cooler Breakdown: Date: 2/3/11 Time: 1103 by: CMK

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO	
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO	
3.	Were correct containers used for the tests indicated?	(YES)	NO	
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated			(N/A)

Explain any discrepancies: _____

Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 2/3/11/ TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on February 4, 2011. For your reference, these analyses have been assigned our service request number **R1100666**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1100666
Project:	ESTCP PED LC34/ TR0272 2/3/11	**Date Received:**	2/4/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Six (6) water samples were collected by the client on 2/3/11 and were received for analysis at Columbia Analytical Services on 2/4/11 via a national courier. The samples were received at a cooler temperature of 1°C, within the 0-6°C guidelines.

Volatile Organic Compounds by EPA Method 8260C

Water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except the following: The minimum response factor for Carbon Tetrachloride was not met in the ICV from 1/7/11. The data has been considered acceptable since the MRL has been verified by the low standard in the calibration.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) recoveries were all within QC limits.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several compounds had hits above the calibration range of the standards. The hits are flagged as "E", estimated. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". Both sets of data are included in the report. Only the "E", estimated values should be used from the diluted reanalysis.

The 1,1,2-Trichloro-1,2,2-trifluoroethane and cis-1,2-Dichloroethene hits for location LC34-IW0067D1-068.0-20110203 (R1100666-006) are carryover from the hits in the previous location (-005).

Samples were analyzed within 7 days from collection, the holding time for unpreserved vials.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Approved by Karen Burdett **Date** 2/28/11

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1100666

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Cooler Receipt And Preservation Check Form

Project/Client GeoSyntec Folder Number R1100dda.

Cooler received on 2/4/11 by: BD **COURIER:** CAS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	YES	(NO)			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO			
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	YES	(NO)	N/A		
5.	Were (Ice) or **Ice packs** present?	(YES)	NO			
6.	Where did the bottles originate?	(CAS/ROC)	CLIENT			
7.	Temperature of cooler(s) upon receipt:	1°				
	Is the temperature within 0° - 6° C?:	(Yes)	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 2/4 @ 0934

Thermometer ID: (IR GUN#3) / IR GUN#4 Reading From: (Temp Blank) / Sample Bottle

If out of Temperature, note packing/ice condition, Client Approval to Run Samples: _____

PC Secondary Review: KB 2/4/11

Cooler Breakdown: Date: 2/4/11 Time: 1108 by: CMK

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

pH	Reagent	YES	NO	Lot Received	Exp
≥12	NaOH				
≤2	HNO_3				
≤2	H_2SO_4				
Residual Chlorine (-)	For TCN and Phenol			If present, contact PM to add ascorbic acid	
	$Na_2S_2O_3$	-	-		
	Zn Aceta	-	-		
	HCl	*	*		

Sample ID	Vol. Added	Lot Added	Final pH

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Bottle lot numbers: O-235-002

Other Comments:

PC Secondary Review: KB 2/22/11

*significant air bubbles: VOA > 5-6 mm : WC >1 in. diameter

Laboratory Results for: ESTCP LC34 TR0272

Dear Cory:

Enclosed are the results of the sample(s) submitted to our laboratory on January 25, 2011. For your reference, these analyses have been assigned our service request number **R1100446**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

00001

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1100446

Lab ID	Client ID
R1100446-001	LC34-WS0001-0000-20110124

All samples were received in good condition unless otherwise noted on the cooler receipt and preservation check form located at the end of this report.

All samples were preserved in accordance with approved analytical methods.

All samples have been analyzed by the approved methods cited on the analytical results pages.

All holding times and associated QC were within limits.

No analytical or QC problems were encountered.

All sampling activities performed by CAS personnel have been in accordance with "CAS Field Procedures and Measurements Manual" or by client specifications.

Columbia Analytical Services™

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, Ontario, Canada N1G 5G3

Re: Project: ESTCP PED LC34/TRO272
CAS Submission # R1101575 Revised

Dear Mr. Repta,

Enclosed is the revised analytical data report for the above referenced project. The initial report did not meet the NASA requirements for issuing 1 data point per location per compound. We have revised this report to merge all VOC data and report any standard calibration exceedences from the diluted analytical run. All TOC data is reported as the average of the quad results.

Please contact me at (585)-288-5380 if you have questions regarding this information.

Sincerely,
COLUMBIA ANALYTICAL SERVICES

Karen Bunker
Project Manager

Project:	ESTCP PED LC34/ TR0272 3/22,28,29/11	**Date Received:**	3/24,30/11
Sample Matrix:	Water		

CASE NARRATIVE
Revised: 5/5/11

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Twenty-four (24) water samples including two (2) Trip Blanks were collected by the client on 3/22/11, 3/28-29/11 and were received for analysis at Columbia Analytical Services on 3/24/11 and 3/30/11 via a national courier. The samples were received at sample temperatures of 6 and 3°C respectively, within the 0-6°C guidelines. One (1) Trip Blank vial had air bubbles in 1 of the 3 vials received for the samples, no data is affected.

Several Sample ID's were revised as per a client email from 4/5/11. Permission to analyze Trip Blank LC34-TB 20110322-01 from 3/24/11 (not noted on the Chain of Custody) was given via the client on 3/25/11.

Volatile Organic Compounds

Twenty-four (24) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C. Two (2) water samples were analyzed for gases by GC method RSK 175.

Initial and Continuing Calibration Criteria was met for all samples except the following 8260 compounds:
Dichlorodifluoromethane %Differences (%D) was out at -27.2 (criteria is ±20%) on the 3/2811 CCV
n-Butanol (-33.4), MEK (-21.9), Acetone (-27.4), and Dichlorodifluoromethane (26.6) were outside limits on the 3/29/11 CCV.
When CCV %D criteria are not met, it may indicate some bias in the quantitation for that target compound in the associated samples.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LCSD- RSK's only) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

Samples were analyzed within 7 days from collection, the holding time for unpreserved vials.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Approved by Karen Burke **Date** 5/5/11

HPLC Methodology

Two (2) water samples were analyzed for Organic Acids by HPLC.

All Initial and Continuing Calibration Criteria were met.

Batch QC is included in the report. All LCS and LCSD recoveries were within QC acceptance limits. All RPD calculations were acceptable.

All samples were analyzed within the proper holding time for the method.

The Laboratory Method Blanks were free from contamination.

No problems were encountered during the analysis of these samples.

Inorganic Parameters

Two (2) water samples were analyzed for TOC by method 9060 and Bromide and Iodide by IC method 300.0. Two (2) additional water samples were analyzed for Bromide, Iodide, TOC and Sulfide by method SM4500-S2-F, Chloride, Nitrate and Nitrite by IC Method 300.0, and Alkalinity by SM2320 B. The TOC Quad average has been reported.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

All holding times were met except for the Nitrate and Nitrite analyses which were received outside the 48 hour holding time for these methods. The data is flagged as "*". The analyses were completed as soon as possible upon receipt at the laboratory.

Location LC34-RW0007-038.5-20110328 (CAS Submission # R1101575-013) was repeated for Nitrite due to carry over from a nearby peak on the initial run. As per client instructions, only the latter data has been reported.

All Laboratory Method Blanks were free from contamination.

Approved by Karen Burke **Date** 5/5/11

Columbia Analytical Services™

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Cooler Receipt And Preservation Check Form

Project/Client Geosyntec Folder Number R1101575

Cooler received on 3/24/11 by: KD **COURIER:** CAS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	(YES)	NO			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO			
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	YES	(NO)	N/A		
5.	Were **Ice** or **Ice packs** present?	(YES)	NO			
6.	Where did the bottles originate?	(CAS/ROC), CLIENT				
7.	Temperature of cooler(s) upon receipt:	9°		6°		
	Is the temperature within 0° - 6° C?:	Yes	Yes	(Yes)	Yes	Yes
	If No, Explain Below	(No)	No	No	No	No

Date/Time Temperatures Taken: 3/24/11 0938

Thermometer ID: IR GUN#3 / (IR GUN#4) Reading From: (Temp Blank) / (Sample Bottle)

If out of Temperature, note packing/ice condition, Client Approval to Run Samples: Samples OK KD 3/24/11

PC Secondary Review: KB 3/24/11

Cooler Breakdown: Date: 3/24/11 Time: 1140 by: BD

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies:

pH	Reagent	YES	NO	Lot Received	Exp
≥12	NaOH				
≤2	HNO_3				
≤2	H_2SO_4			WC10300A	2/12
Residual Chlorine (-)	For TCN and Phenol			If present, contact PM to add ascorbic acid	
	$Na_2S_2O_3$	-	-		
	Zn Aceta	-	-		
	HCl	*	*		

Sample ID	Vol. Added	Lot Added	Final pH

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Bottle lot numbers: 0-235-00252, 071210-288 BD 3/24/11

Other Comments:

H_3PO_4 WC9211157 exp: 11/14

PC Secondary Review: KB 4/15/11

*significant air bubbles: VOA > 5-6 mm : WC >1 in. diameter

May 06, 2011 Service Request No: R1101876

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on April 8, 2011. For your reference, these analyses have been assigned our service request number **R1101876**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1101575
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	4/8/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Sixteen (16) water samples including one (1) Trip Blank were collected by the client on 4/1,7/11 and were received for analysis at Columbia Analytical Services on 4/8/11 via a national courier. The samples were received at a cooler temperature of 4°C, within the 0-6°C guidelines.

Volatile Organic Compounds

Sixteen (16) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except the following: the minimum response factor for Carbon Tetrachloride was not met in the ICAL/Daily CCV from 4/12/11.The data has been considered reportable since the MRL has been verified by the low standard in the calibration.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) recoveries were all within QC limits.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

Samples were analyzed within 7 days from collection, the holding time for unpreserved vials which were to be used for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. It was found that samples LC34-EF0001-000.0-20110401 and LC34-EF0002-000.0-20110401 (CAS Submission #R1101876-011 and -012 respectively) were collected in preserved vials. These 2 samples were collected on 4/1/11 and received on 4/8/11and were run within the 14 day holding time for preserved vials (pH <2). The Vials themselves were also checked and found to be labeled as preserved. The preservative would inhibit the N-Butyl Acetate value for these samples.

The Laboratory Method Blanks were free from contamination except for low level hits between the MRL and MDL for the compound 1,2,4-Trichlorobenzene on the 4/12/11 and 4/13/11 analytical runs.

No other analytical or QC problems were encountered.

Approved by Karen Burdick **Date** 5/6/11

HPLC Methodology

Two (2) water samples were analyzed for Organic Acids by HPLC.

All Initial and Continuing Calibration Criteria were met.

Batch QC is included in the report. All LCS and LCSD recoveries were within QC acceptance limits. All RPD calculations were acceptable.

All samples were analyzed within the proper holding time for the method.

The Laboratory Method Blanks were free from contamination.

No problems were encountered during the analysis of these samples.

Inorganic Parameters

Two (2) water samples were analyzed for TOC by method 9060 and Bromide and Iodide by IC method 300.0. The TOC Quad average has been reported.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

All holding times were met for these analyses.

All Laboratory Method Blanks were free from contamination.

Approved by Karen Burchett **Date** 5/6/11

CASE NARRATIVE

This report contains analytical results for the following samples:

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

May 12, 2011 Service Request No: R1102105

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory between April 19, 2011 and April 20, 2011. For your reference, these analyses have been assigned our service request number **R1102105**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1102105
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	4/19-20/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Fifty-two (52) water samples including three (3) Trip Blanks were collected by the client on 4/18-19/11 and were received for analysis at Columbia Analytical Services on 4/19-20/11 via a national courier. The samples were received at cooler temperatures ranging from 1-7°C on the 4/19/11 shipment and 2.8-3.6. Temperature guidelines are 0-6°C. The TOC's, VOC's and Metabolic Acids arrived on ice but slightly above guidelines (7°) in the 4/19/11 shipment due to insufficient ice in the cooler. Several sample ID's were changed as per instructions from client email of 4/21/11.

Headspace existed in 1 of 3 VOC vials for 3 locations, no data was affected. See Cooler Preservation Check Form for specific locations. Sulfide bottles had headspace for locations: BW0001D, BW0001B, BW0001C and IW0002I. The sample label for the 8260C location BW0001 (CAS R1102105-011) was determined to be "D" by process of elimination. Bromide and Iodide aliquot for BW002F was determined by process of elimination. The following locations had bubbles in VOC vials: BW002A (and RSK vials), BW002B, BW002D, BW002E, BW002F (and RSK vials), FD-20110419-10 and FD-02110419-01. Additionally BW002C and RD-2011-419-03 RSK vials had bubbles present. All vials were observed by the Project Manager on 4/21/11. Only 1 vial was affected for each sample. Bubbles ranged from 0.6 cm to 1.5 cm. Permission to analyze samples was given in client email from 4/20/11.

Locations BW02C and BW-3C (R1102105-039 and -046 respectively) were not noted for Sulfide and Anions on the chain. Aliquots were received for these locations. Analyses were conducted as per client email from 4/20/11.

Volatile Organic Compounds

Forty-two (42) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C. Twenty-seven (27) waters samples were analyzed for GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples except the following: the minimum response factor for Carbon Tetrachloride was not met in the ICAL/Daily CCV from 4/21/11. The data has been considered reportable since the MRL has been verified by the low standard in the calibration. The Continuing Calibration Verification (CCV) standard exceeded 20% Difference criteria for Chloromethane on 4/23/11. All detected concentrations for this compound in samples associated with this CCV should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (RSK) recoveries were all within QC limits except for 8260C LCS for n-Butanol on 4/23/11 which was outside limits, high. The recovery is flagged as "*".

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All samples were initially analyzed within 7 days from collection, the holding time for unpreserved vials which were to be used for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of

Approved by Karen Beerbower **Date** 5/17/11

the sample. Location LC34-FD-20110419-10 (CAS Submission #R1102150-060) dilution was run on the 8th day from sample collection. The compound is flagged as "*", outside of holding time.

The Laboratory Method Blanks were free from contamination except for low level hits between the MRL and MDL for the compound 1,2,4-Trichlorobenzene on the 4/25/11 and 4/263/11 analytical runs.

No other analytical or QC problems were encountered.

HPLC Methodology

Twenty-seven (27) water samples were analyzed for Organic Acids by HPLC.

All Initial and Continuing Calibration Criteria were met.

Batch QC is included in the report. All LCS and LCSD recoveries were within QC acceptance limits. All RPD calculations were acceptable.

All samples were analyzed within the proper holding time for the method.

The Laboratory Method Blanks were free from contamination.

No problems were encountered during the analysis of these samples.

Inorganic Parameters

Thirty-three (33) water samples were analyzed for TOC by method 9060, 24 Bromide and Iodide by IC method 300.0, and 13 Sulfide by SM 4500-S2-F, Alkalinities by SM 2320 B and Anions: Chloride, Nitrate, Nitrite and Sulfate by IC method 300.0. The TOC Quad average has been reported.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

All holding times were met for these analyses except for 9 Nitrite samples which were repeated outside the 48 hour holding times due to interference from Chloride not noted on the initial runs. Samples were repeated as soon as possible after the interference was detected. All were re-analyzed less than 3 hours outside of the holding time.

All Laboratory Method Blanks were free from contamination.

Approved by Karen Burke **Date** 5/17/11

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

CAS/Rochester Lab ID # for State Certifications[1]

NELAP Accredited
Connecticut ID # PH0556
Delaware Accredited
DoD ELAP #65817
Florida ID # E87674
Illinois ID #200047
Maine ID #NY0032
Nebraska Accredited
Nevada ID # NY-00032
New Jersey ID # NY004
New York ID # 10145
New Hampshire ID # 294100 A/B
Pennsylvania ID# 68-786
Rhode Island ID # 158

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable, except as noted in the laboratory case narrative provided. For a specific list of accredited analytes, refer to the certifications section at www.caslab.com.

July 25, 2011 Service Request No: R1103564

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: LC34 PED/TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on June 24, 2011. For your reference, these analyses have been assigned our service request number **R1103564**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1103564
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	6/24/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Eight (8) water samples were collected by the client on 6/21-22/11 and were received for analysis at Columbia Analytical Services on 6/24/11 via a national courier. The "Test Blank" was placed on hold as per instructions in an email from the client on 6/24/11. Only VOC vials were received for this sample, though the chain of custody indicated Bromide and Iodide also. For location BATCH29-20110622-0745 (R1103564-004), the bottle for Bromide and Iodide was labeled as BATCH26-20110622-0745. The samples were received at a cooler temperature of 3.8°C within the guidelines of 0-6°C.

Volatile Organic Compounds

Seven (7) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (RSK) recoveries were all within QC limits.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All samples were analyzed within 7 days from collection, the holding time for unpreserved vials which were to be used for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

The Laboratory Method Blanks were free from contamination except for a 1,2,4-Trichlorobenzene hit in the 6/27/11 blank and 1,2,4-Trichlorobenzen and Chloroform hits in the 6/28/11 blank. The 1,2,4-Trichlorobenzene hit for BATCH39-20110622-1150 has been flagged as "B" to indicate possible contamination.

No other analytical or QC problems were encountered.

Inorganic Parameters

Seven (7) water samples were analyzed for Bromide and four (4) samples were analyzed for Iodide by IC method 300.0.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

Approved by Karen Burke **Date** 7/26/11

All holding times were met for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analyses of these samples.

Approved by Karen Burchett Date 7/26/11

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1103564

Lab ID	Client ID
R1103564-001	BATCH10-20110621-0825
R1103564-002	BATCH17-20110621-1127
R1103564-003	BATCH26-20110621-1725

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

July 25, 2011 Service Request No: R1103580

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: LC34 PED/TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on June 25, 2011. For your reference, these analyses have been assigned our service request number **R1103580**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1103580
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	6/25/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Three (3) water samples were collected by the client on 6/23/11 and were received for analysis at Columbia Analytical Services on 6/25/11 via a national courier. The "Test Blank" was placed on hold as per instructions in an email from the client on 6/24/11. The samples were received at a cooler temperature of 2.6°C within the guidelines of 0-6°C.

Volatile Organic Compounds

Three (3) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (RSK) recoveries were all within QC limits except for Isopropylbenzene which was outside limits high (134%, limit 133%) on the 6/29/11 analytical run. The recovery has been flagged as "*".

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

No samples required reanalysis for overrange compounds. The sample data is reported in a merged format to be consistent with other reports for this project.

All samples were analyzed within 7 days from collection, the holding time for unpreserved vials which were to be used for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

The Laboratory Method Blanks were free from contamination except for a 1,2,4-Trichlorobenzene hit in the 6/29/11 blank and 1,2,4-Trichlorobenzene and Chloroform hits in the 6/28/11 blank. No data required "B" flags however.

No other analytical or QC problems were encountered.

Inorganic Parameters

Three (3) water samples were analyzed for Bromide and one (1) sample was analyzed for Iodide by IC method 300.0.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

Approved by Kevin Burdick **Date** 7/26/11

All holding times were met for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analyses of these samples.

Approved by Karen Burnham **Date** 7/26/11

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1103580

Lab ID	Client ID

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Laboratory Results for: LC34 - PED TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on June 30, 2011. For your reference, these analyses have been assigned our service request number **R1103657**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1103657
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	6/30/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Seven (7) water samples were collected by the client on 6/27-28/11 and were received for analysis at Columbia Analytical Services on 6/30/11 via a national courier. The samples were received at a cooler temperature of 3.0°C within the guidelines of 0-6°C.

Volatile Organic Compounds

Seven (7) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except for Carbon Disulfide (36.9) and Dichlorodifluoromethane (20.6) which were above the 20 %D on the 7/1/11 run and Dichlorodifluoromethane (25.7) on the 7/5/11 analytical run. Any hits for these compounds on associated runs would be considered estimated, however, all samples were non-detect for these compounds.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (RSK) recoveries were all within QC limits.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Hits above the calibration range of the standards are repeated at the appropriate dilution for the hit. The data is flagged as "D" on the report. The sample data is reported in a merged format to be consistent with other reports for this project at the client's request.

All samples were analyzed within 7 days from collection, the holding time for unpreserved vials which were to be used for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

The Laboratory Method Blanks were free from contamination except for a 1,2,4-Trichlorobenzene hit in the 7/1/11 and 7/5/11 blanks. No data required "B" flags however.

No other analytical or QC problems were encountered.

Inorganic Parameters

Seven (7) water samples were analyzed for Bromide and four (4) samples were analyzed for Iodide by IC method 300.0.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

Approved by Karen S Burdine **Date** 7/29/11

All holding times were met for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analyses of these samples.

Approved by Karen Burdett **Date** 7/29/11

CASE NARRATIVE

This report contains analytical results for the following samples:

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

July 25, 2011 Service Request No: R1103705

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: LC34-PED TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on July 2, 2011. For your reference, these analyses have been assigned our service request number **R1103705**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 134. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1103705
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	7/1/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Eighteen (18) water samples were collected by the client on 6/30/11 and were received for analysis at Columbia Analytical Services on 7/1/11 via a national courier. Some samples/analyses were placed on hold as per instructions on a table included in an email from the client: LC34-DPT328-051.0-20110630 (R1103705-004) VOC's only, LC34-DPT329-030.0-20110630 (R1103705-005) all analytes, LC34-DPT329-045.0-20110630 (R1103705-007) VOC's only, LC34-DPT329-051.0-20110630 (R1103705-008) all parameters, LC34-DPT330-010.0-20110630 (R1103705-009), LC34-DPT330-030.0-20110630 (R1103705-010) all parameters, LC34-DPT331-016.0-20110630 (R1103705-014) Iodide and VOC's, and LC34-DPT331-030.0-20110630 (R1103705-015) VOC's only. A revised Chain of custody was also sent via email to add sample LC34-DPT328-057.0-20110630 (R1103705-018). All chains are included in the report. The samples were received at a cooler temperature of 2.1°C within the guidelines of 0-6°C.

Volatile Organic Compounds

Nine (9) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except the following: The CCV standard exceeded 20% Difference criteria for 1,2-Dichloroethane, 1,1,2,2-Tetrachloroethane, and 1,2-Dibromo,3-chloropropane were not met in the CCV from 7/6/11. The compounds 1,1,2,2-Tetrachloroethane and 1,2-Dibromo,3-chloropropane were not met in the CCV from 7/7/11. All detected concentrations for this compound in samples associated with this CCV should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (RSK) recoveries were all within QC limits.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All samples were analyzed within 7 days from collection, the holding time for unpreserved vials which were to be used for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Approved by Karen Burdick **Date** 7/26/11

Inorganic Parameters

Fourteen (14) water samples were analyzed for Bromide and thirteen (13) samples were analyzed for Iodide by IC method 300.0.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

All holding times were met for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analyses of these samples.

Approved by Karen Burnden **Date** 7/26/11

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

RE: NASA CCAFS LC34, KSC, FL - Final Data Report
KB Labs Project # 11-107

Dear Ms. DaPrato:

Enclosed is the final report of the on-site analysis performed by KB Labs, Inc. at the above referenced site. Samples were collected and analyzed on June 30, 2011. Included are a brief project narrative, data report narrative, tables listing quality control results, final analytical results, and sample chain-of-custody form.

KB Labs' mobile laboratories have been inspected by the FDOH Bureau of Laboratories and are NELAP Certified as of April 1, 2003. Our personnel, methodology, proficiency testing, and quality assurance requirements comply with the guidelines of Chapter 62-160 of the Florida Administrative Code and with the consensus standards adopted at the National Environmental Laboratory Accreditation Conference (NELAC). Data for the site referenced above were determined in accordance with published procedures under Test Methods for Evaluating Solid Waste (EPA SW-846, Update III Revised May 1997). Unless otherwise indicated on the quality control narrative accompanying the data report, the quality assurance and quality control procedures performed in conjunction with analysis of groundwater samples demonstrated that the reported data met our requirements for accuracy and precision under NELAC Standards.

If you have any questions, please do not hesitate to call me or Kelly Bergdoll, President of KB Labs, at (352) 367-0073.

Sincerely,

KB Labs, Inc.

Todd Romero
Director of Operations

"KB Labs is a small, woman-owned business enterprise."

PROJECT NARRATIVE

Project Scope

On June 30, 2011, a total of 19 water samples were analyzed for GeoSyntec Consultants at KSC, Winter Park, FL. The samples were analyzed for vinyl chloride, freon 113, 1,1-dichloroethene, cis- and trans-1, 2-dichloroethene, trichloroethene, tetrachloroethene, and n-butyl-acetate.

NELAP Certification

KB Mobile Labs Unit KB1: FDOH NELAP Certification Number E8281

KB Labs is not certified for Freon 113 and n-butylacetate. Data should be considered screening level only.

Analytical Procedure

All samples were analyzed using SW846 Method 5030/8260 for waters. Ten (10) milliliters (mL) of water or air (air samples) were purged with helium and the volatile organic compounds (VOCs) were collected on a solid-phase adsorption trap. The adsorption trap was heated and back-purged with helium. The components were then separated by capillary column gas chromatography and measured with a mass spectrometer (GC/MS) operated in the electron impact full-scan mode. The individual VOCs in the samples were measured against corresponding VOC standards.

Analytical Results

Laboratory results were provided to the client on an as-completed or next-day basis. Final results of the on-site analyses are provided in a hardcopy report. The data produced and reported in the field has been reviewed and approved for this final report by the Director of Operations for KB Labs.

Uncertainty of Reported Values

All measurement data presented in this report are subject to a degree of uncertainty and the degree of uncertainty varies with each compound of interest. KB Labs estimates the uncertainty of each measurement using a statistical evaluation of the standard deviation from the mean percent recovery of a number of trials of a given measurement. More specifically, KB Labs maintains historical percent recovery control limits at the 99% confidence level for each analyte of interest. These are calculated as $\pm$ 3 times the standard deviation from the mean of historical measurements of the percent recovery of

KB Labs, Inc.
25132 SW 1st Ave
Newberry, FL 32669
Phone: 352-472-5830
Fax: 352-472-5832
Email: info@kbmobilelabs.com

spikes of the analytes of interest into actual and control sample matrices. For example, if the lower and upper percent recovery control limits for a specific analyte of interest have been determined to be 70 and 100 percent respectively, a reported value of 10.0 ug/L will be with 99% confidence 7.0 to 13.0 ug/L.For more information about KB Labs estimation of uncertainty, contact KB Labs' quality assurance officer and/or request a copy of KB Labs' SOP for determining measurement uncertainty.

Quality Control (QC) Data

Surrogate Recoveries – Table 1 lists the daily analytical sequence and percent recovery results for surrogate compounds, which were added to all analyses. Four (4) surrogate compounds were added to each analysis in order to continually monitor general method performance.

VOC Spike Recoveries – Table 2 lists the percent recovery results for matrix spike and laboratory control samples. A known amount of each target compound was added to selected field samples and to laboratory reagent water in order to monitor the performance of each of the target compounds in the actual matrix and in laboratory reagent water.

Method Blanks – Daily analysis of laboratory reagent water samples was performed in order to monitor the cleanliness of the analytical system.

DATA REPORT NARRATIVE

1. All sample data has been reviewed and, if required, updated in the Final Data Report for rounding and significant figures.

2. Changes for sample ID LC34-DPT329-045.0-20110630 from Field Data Report:
   Freon 113 1200 ug/L changed to 5000 ug/L.
   Trichloroethene 39000 ug/L changed to 34000 ug/L.

3. Sample ID LC34-DPT330-045.0-20110630 reported trichloroethene 38000 ug/L in Field Report. Changed to 3800 ug/L.

4. As per NASA Client request for diluted samples between the lab RL and MDL are reported with FDEP Data Qualifier "I". Some results were changed from the Field Report to the Final Report to reflect this requirement.

5. Because there is no MDL for n-Butylacetate, values below PQL are reported with FDEP Data Qualifier "J" for estimated data.

Comments:	Although some surrogates may be out of the control percent recovery range, other supporting QC, such as matrix spikes, matrix spike duplicates, method blanks, and laboratory control samples, are performed by KB Labs to further validate reported data.								

***Surrogate Compounds:**
S1 = Dibromofluoromethane (84% - 121%)
S2 = 1,2- Dichloroethane-D4 (69% - 133%)
S3 = Toluene-D8 (87% - 111%)
S4 = 4-Bromofluorobenzene (76% - 125%)

Laboratory Results for: ESTCP PED LC34 TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on July 8, 2011. For your reference, these analyses have been assigned our service request number **R1103812**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1103812
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	780/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Eleven (11) water samples were collected by the client on 7/7/11 and were received for analysis at Columbia Analytical Services on 7/8/11 via a national courier. The samples were received at a cooler temperature of 3.0°C within the guidelines of 0-6°C.

Volatile Organic Compounds

Eleven (11) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except for 1.1.1-Trichloroethane (23.0), 1,2-Dichloroethane (20.2), Carbon Disulfide (25.0), Chloroform (20.9) and Trichlorofluoromethane (21.8) which were above the 20 %D on the 7/10/11 run. Any hits for these compounds on associated runs would be considered estimated and are flagged as "J". Hits were between the MRL and MDL.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) recoveries were all within QC limits.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Hits above the calibration range of the standards are repeated at the appropriate dilution for the hit. The data is flagged as "D" on the report. The sample data is reported in a merged format to be consistent with other reports for this project at the client's request.

All samples were analyzed within 7 days from collection, the holding time for unpreserved vials which were to be used for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

The Laboratory Method Blanks were free from contamination except for a 1,2,4-Trichlorobenzene hit in the 7/10/11 blank and 1,2,4-Trichlorobenzene, Acetone, and Chloroform in the 7/11/11 blank. No data required "B" flags however.

No other analytical or QC problems were encountered.

Inorganic Parameters

Eleven () water samples were analyzed for Bromide and Iodide by IC method 300.0.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

Approved by _____ **Date** 8/3/11

All holding times were met for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analyses of these samples.

Approved by Karen Burke **Date** 8/3/11

CASE NARRATIVE

This report contains analytical results for the following samples:

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Laboratory Results for: ESTCP PED LC24 TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on August 2, 2011. For your reference, these analyses have been assigned our service request number **R1104260**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

00001

Client:	Geosyntec	**Service Request No.:**	R1104260
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	8/2/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Twenty-nine (29) water samples were collected by the client on 8/1/11 and were received for analysis at Columbia Analytical Services on 8/2/11 via a national courier The samples were received at a cooler temperature range of 2.5-4.0°C within the guidelines of 0-6°C. Bubbles were noted in several VOC vials, however in each case at least 1 of the 3 vials for each sample was bubble free. Six samples for Sulfide and Alkalinity also contained bubbles in the bottles. All are noted on the Cooler Receipt and Preservation Check Form at the end of the report. Location LC34-BW0001C-038.5-20110801 (R1104260-017) requested RSK-175, however no vials were received for this location for this analysis. A VOC vial was used to run this analysis.

Organic Compounds

Nineteen (19) water samples including one (1) Trip Blank were analyzed for a client specific list of Volatile Organics by Method 8260C. Fourteen (14) samples were also analyzed for Organic Acids by HPLC. Thirteen (13) locations were analyzed for GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples for 8260C except the Continuing Calibration Verification (CCV) standard exceeded 20% Difference criteria for Bromomethane on the 8/4/11 analytical run and 1,2,4-Trichlorobenzene (32.2%) and MEK (-22.5%)on the 8/5/11 run. All detected concentrations for these compounds in samples associated with these CCV should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Site specific QC is included in the report for locations LC34-IW0002D1-052.5-20110801 (CAS #R1104260-009) for 8260C, LC34-IW0002I-027.5-20110801 (CAS # R1104260-005) for Organic Acids, and LC34-IW0002D-037.5-2011080 (CAS #R1104260-007) for RSK-175. All Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were within limits except for 1,2,4-Trichlorobenzene (outside limits high) and cis-1,2-Dichloroethene. All Relative Percent Difference (RPD) calculations were acceptable. The Laboratory Control Samples (LCS) and LCS Duplicate (RSK & Organic Acids) recoveries were all within QC limits except for 1,2,4-Trichlorobenzene which was outside limits high on the 8/5/11 run. The exceedences have been flagged as "*". The Acetic Acid and Butanoic Acid recoveries are flagged as "#". The sample was spiked too low for these compounds (<4X the concentration in the sample) to accurately determine the recoveries.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were initially analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. The RSK-175 samples were analyzed within 14 days of collection for preserved samples. Location -017 was analyzed out of the holding time for unpreserved samples since a VOC vial was used for this analysis as noted above. Organic Acids were analyzed within the proper holding time.

Approved by Karen Burdick **Date** 9/1/11

The Laboratory Method Blanks were free from contamination except for Acetone which contained a low level hit on the 8/5/1113:34 analytical run and n-Butanol on the 8/5/11 12:11 run. Any affected data is flagged as "B" in the report.

For the RSK analysis, there was a slight shift in Retention Time (RT) and poor peak shape (very broad instead of Gaussian) for ethane during the analysis of these samples. It appears that coelution is occurring, but we don't have the ability to differentiate between ethane and the co-eluting compound. The Ethane results may be biased high.

The Primary Standard mix for RSK expired on 8/6/11. The Secondary Standard mix expired on 8/9/11. Both standards have shown little to no degradation over the past year. New standards have been ordered but not yet received.

No other analytical or QC problems were encountered.

Inorganic Parameters

Fourteen (14) water samples were analyzed for Bromide and Iodide by IC method 300.0 and dissolved ICP Metals. Thirteen (13) samples were analyzed for TOC by method 9060A. Twelve (12) of the samples were analyzed for Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Nitrate, Nitrite, and Sulfate by IC method 300.0 The soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Site QC is included in the report for locations LC34-RW0008-052.0-20110801 (CAS #R1104260-003) TOC, LC34-BW0001E-052.5-2011081 (CAS #R1104260-021) Iodide and Alkalinity, and LC34-BW0001F-059.5-20110801 (CAS# R1104260-023) Anions and LC34-BW0001B-031.5-20110801 (CAS #R1104260-016) Dissolved Metals. All Matrix Spike (MS) recoveries were within QC acceptance limits. All Relative Percent Difference (RPD) calculations were acceptable. All Laboratory Control Sample (LCS) recoveries were within QC limits.

All holding times were met for these analyses for the initial analysis. Eleven (11) Nitrite samples required reanalysis due to high Chloride concentrations which caused interferences on the initial run. The samples were repeated outside the 48 hour holding time ranging from approximately 1-10 hours. The affected sample data is flagged as "*".

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analyses of these samples.

Approved by Karen Burke **Date** 9/1/11

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Analyte Name	**Result**	**Spike Amount**	**% Rec**	**Result**	**Spike Amount**	**% Rec**	**% Rec Limits**	**RPD**	**RPD Limit**
Pyruvic Acid	1.29	1.00	129	1.24	1.00	124	70 - 130	4	30
Acetic Acid	8.73	10.0	87	9.05	10.0	91	70 - 135	4	30
Butanoic Acid (Butyric Acid)	7.88	10.0	79	8.65	10.0	86	78 - 113	9	30
Lactic Acid	10.1	9.97	102	10.0	9.97	100	61 - 109	1	30
Propionic Acid	8.11	9.97	81	8.81	9.97	88	80 - 125	8	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

COLUMBIA ANALYTICAL SERVICES, INC.

QA/QC Report

Client: GeoSyntec Consultants
Project: ESTCP PED LC24 TR0272
Sample Matrix: Water

Service Request: R1104260
Date Analyzed: 8/15/11

Lab Control Sample Summary
Organic Acids in Aqueous Matrices by High Performance Liquid Chromatography (HPLC) 28 Day Hold Time

Analytical Method: Organic Acids

Units: mg/L
Basis: NA

Analysis Lot: 257563

	Lab Control Sample RQ1107913-02			Duplicate Lab Control Sample RQ1107913-03					
Analyte Name	**Result**	**Spike Amount**	**% Rec**	**Result**	**Spike Amount**	**% Rec**	**% Rec Limits**	**RPD**	**RPD Limit**
Pyruvic Acid	1.17	1.00	117	1.16	1.00	116	70 - 130	<1	30
Acetic Acid	9.73	10.0	97	9.68	10.0	97	70 - 135	<1	30
Butanoic Acid (Butyric Acid)	10.6	10.0	105	9.64	10.0	96	78 - 113	9	30
Lactic Acid	9.38	9.97	94	9.30	9.97	93	61 - 109	<1	30
Propionic Acid	9.15	9.97	92	9.37	9.97	94	80 - 125	2	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Cooler Receipt And Preservation Check Form

Project/Client Geosyntec Folder Number R1104260

Cooler received on 8/2/11 by: AP **COURIER:** CAS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	YES	(NO)			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)?	YES	(NO)			
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	(YES)	NO	N/A*		
5.	Were **Ice** or **Ice packs** present?	(YES)	NO			
6.	Where did the bottles originate?	(CAS/ROC)	CLIENT			
7.	Temperature of cooler(s) upon receipt:	3.5°	4.0°	2.8°	2.5°	
	Is the temperature within 0° - 6° C?:	(Yes)	(Yes)	(Yes)	(Yes)	Yes
	If No, Explain Below	No	No	No	No	No

Inal rec'd broken for BW0001E-8260, BW0001B-met-acid cap cracked for BW0001E but septa held it shut, new cap upon receipt

Date/Time Temperatures Taken: 8/2/11 1011

Thermometer ID: (IR GUN#3) / IR GUN#4 Reading From: (Temp Blank) / Sample Bottle

If out of Temperature, note packing/ice condition, Client Approval to Run Samples: all noted on ack.

PC Secondary Review: KB 8/2/11

Cooler Breakdown: Date: 8/2/11 Time: 1615 by: AP

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	YES	(NO)
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated N/A		

Explain any discrepancies: did not receive RSK-175 for location BW0001C

Guelph, ON N1G 5G3
CANADA

Laboratory Results for: LC34 PED TR0272 8/2/11

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory between August 3, 2011 and August 5, 2011. For your reference, these analyses have been assigned our service request number **R1104287**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1104287
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	8/3,5/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Twenty-eight (28) water samples were collected by the client on 8/2-3/11 and were received for analysis at Columbia Analytical Services on 8/3/11 and 8/5/11 via a national courier The samples were received at a cooler temperature range of 2.8-5.3°C within the guidelines of 0-6°C. Bubbles were noted in 1 of the 3 vials for samples noted on the Cooler Receipt and Preservation Check Form at the end of the report. No data was affected.

Organic Compounds

Eighteen (18) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C. Fourteen (14) of these samples were also analyzed for GC Method RSK-175 and Organic Acids by HPLC.

Initial and Continuing Calibration Criteria was met for all samples for 8260C except the Continuing Calibration Verification (CCV) standard exceeded 20% Difference criteria for Acetone (23.7%) on the 8/16/11 analytical run. All detected concentrations for this compound in samples associated with this CCV should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report for 8260C and RSK-175. Site QC is included in the report for location LC34-BW0002A-024.5-201108 (CAS # R1104287-001). All Matrix Spike (MS) and Matrix Spike Duplicate (MSD) and Laboratory Control Samples (LCS) and LCS Duplicate (RSK & Organic Acids) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All samples were initially analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Samples LC34-BW0002D-045.5-20110802-D (CAS #R1104287-013) and LC34-TB-20110803 (CAS #R1104287-028) were repeated outside of holding time due to possible carry over contamination in the initial runs. The -013 sample results were confirmed as reported on the initial run. The Trip Blank results did indicate carry over as the repeated sample had no hits. Only the initial data is included in the report as per the EDD requirements of only 1 set data to be reported.

The Laboratory Method Blanks were free from contamination except for Acetone which contained a low level hit on the 8/5/11 analytical run. Affected data is flagged as "B" in the report.

For the RSK analysis, there was a slight shift in Retention Time (RT) and poor peak shape (very broad instead of Gaussian) for ethane during the analysis of these samples. It appears that coelution is occurring, but we don't have the ability to differentiate between ethane and the co-eluting compound. The Ethane results may be biased high.

Approved by Karen Rensher **Date** 8/31/11

The Primary Standard mix for RSK expired on 8/6/11. The Secondary Standard mix expired on 8/9/11. Both standards have shown little to no degradation over the past year. New standards have been ordered but not yet received.

No other analytical or QC problems were encountered.

Inorganic Parameters

Fourteen (14) water samples were analyzed for Bromide and Iodide by IC method 300.0, and TOC by 9060A. Three (3) of the samples were analyzed for Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Nitrate, Nitrite, and Sulfate by IC method 300.0

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report for the Anions, Sulfide and Alkalinity. Site Specific QC is included for locations LC34-BW0002C-038.5-20110802 (CAS #R1104287-003) Br and SO4, LC34-BW0003B-031.5-20110802 (CAS #R1104287-008) Br and I, and LC34-BW0003D-045.5-20110802 (CAS #R1104287-010) I. All Matrix Spike (MS) recoveries were acceptable except for Bromide (-003) and Iodide (-010). The recoveries have been flagged as "*". All Relative Percent Difference (RPD) calculations were acceptable. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

All holding times were met for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analyses of these samples.

Approved by Karen Burnham **Date** 8/31/11

CASE NARRATIVE

Columbia Analytical Services INC

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Matrix Spike Summary
Organic Acids in Aqueous Matrices by High Performance Liquid Chromatography (HPLC) 28 Day Hold Time

Sample Name: LC34-BW0002A-024.5-20110802
Lab Code: R1104287-001

Units: mg/L
Basis: NA

Analytical Method: Organic Acids

Analyte Name	Sample Result	LC34-BW0002A-024.5-20110802MS Matrix Spike RQ1108162-04 Result	Spike Amount	% Rec	LC34-BW0002A-024.5-20110802DMS Duplicate Matrix Spike RQ1108162-05 Result	Spike Amount	% Rec	% Rec Limits	RPD	RPD Limit
Pyruvic Acid	ND	0.950	1.00	95	0.940	1.00	94	25 - 152	1	30
Acetic Acid	13	21.4	10.0	79	21.4	10.0	79	13 - 167	<1	30
Butanoic Acid (Butyric Acid)	ND	11.2	10.0	112	10.7	10.0	107	49 - 145	5	30
Lactic Acid	ND	9.48	9.97	95	9.58	9.97	96	27 - 127	1	30
Propionic Acid	ND	9.31	9.97	93	9.11	9.97	91	68 - 133	2	30

Results flagged with an asterisk (*) indicate values outside control criteria.
Results flagged with a pound (#) indicate the control criteria is not applicable.
Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

August 25, 2011 Service Request No: R1104376

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: LC34 TR0272 Soils

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on August 5, 2011. For your reference, these analyses have been assigned our service request number **R1104376**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Columbia Analytical Services INC

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

ACCREDITED IN ACCORDANCE WITH nelac

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable, except as noted in the laboratory case narrative provided. For a specific list of accredited analytes, refer to the certifications section at www.caslab.com.

Client:	Geosyntec	**Service Request No.:**	R1104376
Project:	ESTCP PED LC34/ TR0272 8/3/11	**Date Received:**	8/5/11
Sample Matrix:	Soil		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Seventeen (17) soil samples were collected by the client on 8/3/11 and were received for analysis at Columbia Analytical Services on 8/5/11 via a national courier. The samples were received at a cooler temperature of 3.1°C, within the 0-6°C guidelines.

Volatile Organic Compounds

Seventeen (17) soil samples were analyzed for a client specific list of Volatile Organics by Method 8260C. All samples were analyzed for % Solids in order to report the data on a dry weight basis.

Methanol (MeOH) extracts for sample locations LC34-DPT0332-045.0-20110803 (CAS # R1104376-003), LC34-DPT0333-048.5-20110803 (CAS# R1104376-010) and LC34-DPT0334-045.5-20110803 (CAS# R1104376-014) either had some loss or no methanol in the vials. The Medium levels were prepared using the % Solids aliquots: 5 grams sample/ 10 ml MeOH on 8/15/11.

Neither low level vials for sample LC34-DPT0334-053.0-20110803 (CAS #R1104376-017) contained water in the vials. The VOC sample was prepared using % Solids aliquot jar 5 grams sample/5 ml DI on 8/16/11.

Initial and Continuing Calibration Criteria was met for all samples except the following 8260 compounds:
1,2-Dichloroethane %Differences (%D) was out at 21.7% (criteria is ±20%) on the 8/1211 CCV,
Vinyl Chloride (23.0%) was outside limits on the 8/13/11 CCV,
MEK (-24.3%) was out on the 8/15/11 run,
1,2-Dichloroethane (21.0%), Chloromethane (34.2%), and Vinyl Chloride (54.2%) were out on the 8/16/11 run,
and Trichloroethene (21.6%) was out on the 8/26/11 run.

When CCV %D criteria are not met, it may indicate some bias in the quantitation for that target compound in the associated samples. Any hits for these compounds in these specific runs should be considered as estimated.

All sample surrogate recoveries were within acceptance limits.

The Internal Standards (IS) were low for sample location LC34-DPT0332-053.0-20110803 (CAS# R1104376-005). The sample was repeated and the IS results were confirmed. Matrix Interference is suspected. The IS were also low for sample LC34-DPT0333-053.0-20110803 (R1104376-011). The second vial for this location had sample encrusted in the cap and therefore a poor seal resulting in a bad purge. Data was not used from the second run attempt.

Site QC was performed on locations LC34-DTP0333-044.0-20110803 and LC34-DPT0333-045.5-20110803 (CAS # R1104376-007 and R1104376-008 respectively). The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were within acceptance limits for all compounds except for n-Butanol (MS only) on the (-008) sample which was the result of carry over. All Laboratory Control Samples (LCS) and LCS Duplicate (LCSD) recoveries were all within QC limits except for the following:
1,2-Dichloroethane (LCS/LCSD), MEK (LCSD), Carbon Disulfide (LCSD), Chloromethane (LCS/LCSD), and Vinyl Chloride (LCS/LCSD) on the 8/16/11 analytical run.

Approved by Karen Burdick **Date** 9/7/11

All Relative Percent Difference (RPD) calculations were acceptable except for n-Butanol. All exceedences have been flagged as "*".
The laboratory attributed the LCS/LCSD recovery exceedences to problems with the Helium pressure. The affected sample locations LC34-DPT0333-048.5-20110803 (CAS# R1104376-010), LC34-DPT0334-045.5-20110803 (CAS# R1104376-014), and LC34-DPT0334-053.0-20110803 (CAS #R1104376-017) were initially run low level within holding time under this QC. The low level samples were repeated outside of holding time which mostly confirmed the initial results. Locations -010 and -014 were repeated as Medium levels using the % Solids aliquots. The Medium level analysis did not confirm the low level run hits for cis-1,2-dichloroethene and Trichloroethene for these locations however. Only the initial runs have been reported for these samples with "E" flagged results due to the estimation for over-range hits. The results for these compounds for all runs are noted in the table below for your review:

	Run 1 low level (Run QC out)	Run 2 low level (out of HT)	Medium Level (from TS aliquot)
-010 cis, 1,2-DCE	558 ppb "E"	567 ppb "E"	31 ppb
TCE	4322 ppb "E"	4342 ppb "E"	210 ppb
-014 cis 1,2-DCE	3423 ppb "E"	2678 ppb "E"	27 ppb
TCE	4903 ppb "E"	8772 ppb "E"	362 ppb

Site QC was done on location LC34-DPT0334-053.0-20110803 (R1104376-017) for % Solids and is included in the report.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Several samples had hits above the calibration range of the standards. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project. Carry over was noted in the initial run for locations LC34-DPT0332-048.0-20110803 (CAS #R1104376-004) and LC34-DPT0334-047.0-20110803 (CAS # R1104376-015) for N-Butanol. The samples were reanalyzed outside of holding time and the results from the reanalysis were reported for this compound only. The reanalysis results are flagged as "*".

Samples were analyzed within the proper holding time for soils except as noted above.

The Laboratory Method Blanks were free from contamination except for Acetone in the 8/12/11 run, Acetone, Dichloromethane and Toluene on the 8/13/11 run, MEK on the 8/14/11 and medium level runs and MEK, and Acetone, Toluene and n-Butyl Acetate on the 8/16/11 low level run . Affected sample hits are flagged as "B".

No other analytical or QC problems were encountered during the analysis of these samples.

Approved by Karen J Burke **Date** 9/7/11

CASE NARRATIVE

Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 TR0272 8/12/11

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on August 13, 2011. For your reference, these analyses have been assigned our service request number **R1104535**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1104535
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	8/12/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Three (3) water samples including one (1) Trip Blank were collected by the client on 8/12/11 and were received for analysis at Columbia Analytical Services on 8/13/11 via a national courier The samples were received at a cooler temperature of 5.3°C within the guidelines of 0-6°C.

Organic Compounds

Three (3) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C. Two (2) water samples were also analyzed for GC Method RSK-175 and Organic Acids by HPLC.

Initial and Continuing Calibration Criteria was met for all samples for 8260C except the Continuing Calibration Verification (CCV) standard exceeded 20% Difference criteria for Dichlorodifluoromethane (-21.7%) on the 8/16/11 analytical run and MEK (-20.6%), Carbon Tetrachloride (-20.2%), and Dichlorodifluoromethane (-20.6%) on the 8/17/11 run. All detected concentrations for these compounds in samples associated with these CCV's should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. Laboratory Control Samples (LCS) and LCS Duplicate recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples had hits above the calibration range of the standards and required multiple dilutions. The samples were repeated at the appropriate dilution for the above range hits. Subsequent hits from the dilutions are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All samples were initially analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

The Laboratory Method Blanks were free from contamination.

The Primary Standard mix for RSK expired on 8/6/11. The Secondary Standard mix expired on 8/9/11. Both standards have shown little to no degradation over the past year. New standards have been ordered but not yet received.

No other analytical or QC problems were encountered.

Approved by _____ **Date** 9/7/11

Inorganic Parameters

Two (2) water samples were analyzed for Bromide and Iodide by IC method 300.0, and TOC by 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F, Dissolved metals by ICP 6010C, and Anions: Chloride and Sulfate by IC method 300.0 and Nitrate and Nitrite by method 353.2. The Nitrate and Nitrite were analyzed by this alternative method in order to meet the appropriate holding time for the analyses which were received on a weekend. The client was notified in the receipt acknowledgment for the samples. The Dissolved metals were filtered in the laboratory.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within QC acceptance limits.

All holding times were met for these analyses.

All Laboratory Method Blanks were free from contamination except for Dissolved Iron and Manganese. Affected data is flagged as "B" for these compounds.

No problems were encountered during the analyses of these samples.

Approved by Karen Beesley **Date** 9/7/11

CASE NARRATIVE

This report contains analytical results for the following samples:

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

September 12, 2011 Service Request No: R1104645

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on August 19, 2011. For your reference, these analyses have been assigned our service request number **R1104645**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1104645
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	8/19/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Three (3) water samples including one (1) Trip Blank were collected by the client on 8/18/11 and were received for analysis at Columbia Analytical Services on 8/19/11 via a national courier The samples were received at a cooler temperature of 3.3°C within the guidelines of 0-6°C. Sulfide bottles as noted on the Cooler Receipt and Preservation Check Form at the end of the report did not indicate preservation on the bottle. Sodium Hydroxide pellets were visible in the bottles, however.

Organic Compounds

Three (3) water samples including one (1) Trip Blank were analyzed for a client specific list of Volatile Organics by Method 8260C. Two (2) samples were also analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples for 8260C.

All surrogate recoveries were within acceptance limits.

Site specific QC is included in the report for locations LC34-RW0008-052.0-20110818 (CAS #R1104645-003) for 8260C. All Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were within limits except for Bromomethane (outside limits low) and Methyl Acetate (outside limits high). All Relative Percent Difference (RPD) calculations were acceptable. The Laboratory Control Samples (LCS) and LCS Duplicate (RSK & Organic Acids) recoveries were all within QC limits.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

The Laboratory Method Blanks were free from contamination.

The Primary Standard mix for RSK expired on 8/6/11. The Secondary Standard mix expired on 8/9/11. Both standards have shown little to no degradation over the past year. New standards have been ordered but not yet received.

No other analytical or QC problems were encountered.

Approved by Karen Burnham **Date** 9/12/11

Inorganic Parameters

Two (2) water samples were analyzed for Bromide and Iodide by IC method 300.0, dissolved ICP Metals, TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Nitrate, Nitrite, and Sulfate by IC method 300.0 The soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Site QC is included in the report for Bromide Sulfate and Nitrate for location LC34-RW0007-038.5-20110818 (CAS #R1104645-001) and LC34-RW0008-052.0-20110818 (CAS #R1104645-003) for TOC. All Matrix Spike (MS) recoveries were within QC acceptance limits except for Bromide and Sulfate. All Relative Percent Difference (RPD) calculations were acceptable. All Laboratory Control Sample (LCS) recoveries were within QC limits. Exceedences are flagged as "*".

All holding times were met for these analyses for all analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analyses of these samples.

Approved by Karen Burdon Date 9/12/11

CASE NARRATIVE

This report contains analytical results for the following samples:

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
